CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the August 1981 publication are the first to be adjusted to the 1978 census. Values for years prior to and including 1978 have been benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. In addition, the calendar year totals of shipments values have been summarily adjusted to conform with the preliminary census of manufactures totals of shipments for that year. Because the monthly estimates subsequent to 1978 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 12,000 establishments in the reporting panel.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance or progress payments on manufacturers' books from total inventory, the value of manufacturer's investment in inventory is derived. At the same time, by

CONCEPTS ET MÉTHODES

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication d'août 1981 sont les premières qui soient ajustées en fonction du recensement de 1978. Les chiffres pour les années jusqu'à 1978 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. L'échantillon demeure essentiellement constant d'une année à l'autre puisqu'il est tiré de la liste des établissements du recensement annuel des manufactures. On doit recourir à l'imputation pour les établissements ayant déclaré trop tard pour être pris en compte dans le calcul des estimations mensuelles. Comme les estimations mensuelles postérieures à 1978 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 12,000 établissements qui produisent des déclarations.

Il est important d'isoler les chiffres des éléments des stocks selon le stade de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leur matières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bâteaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme

reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because the sample is drawn from the list of establishments included in the annual census of manufactures, it remains largely constant from one year to the next. Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

General Time Series Staff,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

investie dans les stocks par les fabricants. De même, en tenant compte des acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

De plus, les données sur les livraisons totales pour l'année civile ont été rectifiées sommairement en fonction des données préliminaires du recensement des manufactures sur les livraisons totales cette année-là. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repère du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Series chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

Service des séries chronologiques générales
Statistique Canada
Ottawa (Ontario) K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one, for the most erratic series it is six. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

Désaisonnalisation

On désaisonnalise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurance du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du *U.S. Bureau of the Census.*

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir renvois pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de six pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

FOOTNOTES

Table 1

(1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

Table 3-4

(1) The series for raw materials in the petroleum industries, goods in process in furniture and fixture industries and inventory held but not owned in the transportation and electrical products industries contain no significant seasonality. In the table of seasonally adjusted series, the unadjusted values are repeated. Any small differences between the unadjusted and adjusted values are due to slightly differing rounding techniques. Other data in the table have been seasonally adjusted.

Note: Figures may not add due to rounding.

RENVOIS

Tableau 1

(1) L'Île-du-Prince Édouard, le Yukon et les Territoires du Nord-Ouest ne sont pas publiés séparément; ils sont inclus dans le total pour le Canada.

Tableau 3-4

(1) La série des matières brutes dans l'industrie pétrolière, des biens en cours de transformation dans l'industrie du meuble et des articles d'ameublement et des stocks détenus mais non possédés dans l'industrie des transports et des produits électriques ne présente aucune tendance saisonnière importante. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables aux deux techniques d'arrondissement. On a procédé à la désaisonnalisation des autres chiffres du tableau.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0V6 (Telephone: 996-7008) or to the Statistics Canada reference centre in:

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7.

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0V6 (téléphone: 996-7008) ou au centre de consultation de Statistique Canada à:

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

. . figures not available.
. . . figures not appropriate or not applicable.
— nil or zero.
- - amount too small to be expressed.
p preliminary figures.
r revised figures.
x confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

. . nombres indisponibles.
. . . n'ayant pas lieu de figurer.
— néant ou zéro.
- - nombres infimes.
p nombres provisoires.
r nombres rectifiés.
x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTICE TO USERS

Estimates in this publication are subject to revision to accommodate newly-received information. It is advisable always to use data from the most recent issue.

AVIS AUX UTILISATEURS

Prière de toujours consulter les numéros de la plus récente publication puisque les estimations qu'elle renferme sont sujettes à révision pour tenir compte des nouveaux renseignements reçus.

Tableau
1. Valeur estimative des livraisons de toutes les industries manufacturières, par province d'origine 2

2. Valeur estimative des livraisons, commandes et stocks des industries manufacturières 3

3. Valeur estimative des livraisons, commandes et stocks des industries manufacturières groupées d'après la Classification type des industries:
Biens non durables — groupes 1, 2, 3, 4, 5, 6, 7, 10, 11, 18, 19 et 20 5
Biens durables — groupes 8, 9, 12, 13, 14, 15, 16 et 17 6

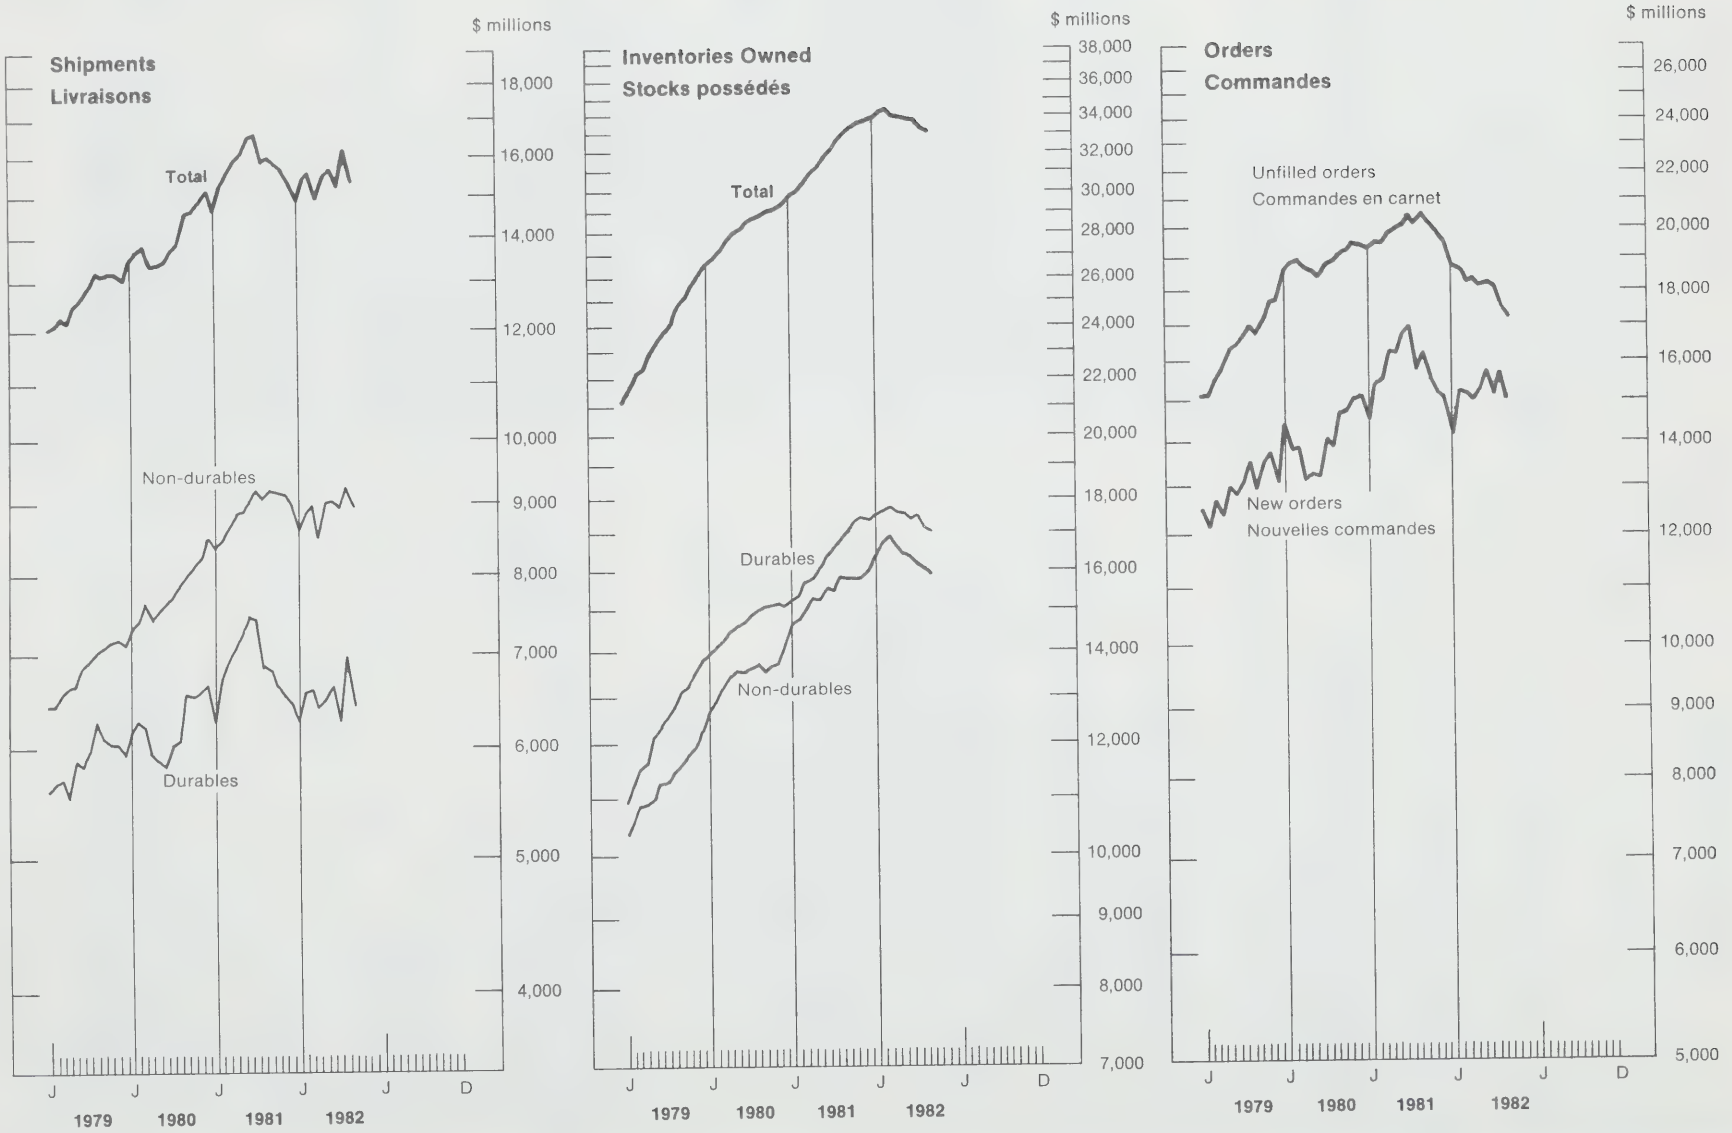
Groupe
1 — Industrie des aliments et boissons 7
2 — Industrie du tabac 8
3 — Industrie du caoutchouc et des produits en matière plastique 8
4 — Industrie du cuir 9
5 — Industrie textile 10
6 — Bonneterie 11
7 — Industrie de l'habillement 12
8 — Industrie du bois 13
9 — Industrie du meuble et des articles d'ameublement 14
10 — Industrie du papier et activités annexes 14
11 — Imprimerie, édition et activités annexes 15
12 — Première transformation des métaux 16
13 — Fabrication de produits en métal (sauf machines et équipement de transport) 17
14 — Fabrication de machines (sauf électriques) 18
15 — Fabrication d'équipement de transport 19
16 — Fabrication de produits électriques 21
17 — Fabrication de produits minéraux non métalliques 22
18 — Fabrication de produits du pétrole et du charbon 23
19 — Industrie chimique 23
20 — Industries manufacturières diverses 24

4. Valeur estimative des livraisons, commandes et stocks des industries manufacturières groupées d'après la classification économique en fonction de l'utilisation:
Industries des biens de consommation non durables 26
Industries des biens de consommation durables 27
Industries des machines et du matériel 28
Industries des matériaux et des éléments de construction 29
Industries des autres produits et fournitures intermédiaires 30
Industries orientées vers l'exportation 31
Classification complémentaire — industries connexes de l'automobile 32

5. Valeur estimative des livraisons, par groupe d'industries et province 34

6. Valeur estimative des livraisons, commandes et stocks de certaines industries particulières 46

7. Rapports du total des stocks possédés et des produits finis aux livraisons, par groupes d'industries (basées sur des chiffres désaisonnalisés) 69



Concepts et méthodes 70

Manufacturer's Shipments, Inventories and Orders, 1979-1982

Les livraisons, les stocks et les commandes des fabricants, 1979-1982

(Seasonally Adjusted — Chiffres désaisonnalisés)

(Ratio scale — Échelle semi-logarithmique)

HIGHLIGHTS

POINTS SAILLANTS

SEPTEMBER — 1982 — SEPTEMBRE

- Because of revisions of all series to new benchmarks developed from current census of manufactures data, all estimates from January 1979 to September 1982 have for the first time with this release been adjusted to 1979 and 1980 benchmarks. The revisions also include classification and sample adjustments, so that current estimates are at slightly different levels from, and not directly comparable to previously published data. However, the month-to-month trends of aggregate series are largely unchanged from those released earlier. Along with the revisions, and for the first time, monthly estimates of the total value of manufacturers' shipments in Prince Edward Island have been specificaly identified along with the estimates for other province.

- À la suite des révisions de toutes les séries à partir des données de référence du recensement des manufactures, toutes les estimations de janvier 1979 à septembre 1982 ont été ajustées pour la première fois dans ce communiqué aux données de référence de 1979 et 1980. Les révisions comprenant les ajustements à la classification et à l'échantillonnage, les estimations sont alors à de différents niveaux et ne sont plus comparables aux données publiées antérieurement. Par contre les tendance observées d'un mois à l'autre des mouvelles séries agrégées sont presque restées les mêmes que les anciennes. La valeur estimative de toutes les industries manufacturières pour la province de l'Île-duPrince-Édouard est maintenant disponible.

- Preliminary estimates show the value of new orders received in Canadian manufacturing industries fell 4.4% in September 1982 to $15,004.6 million, seasonally adjusted, from $15,701.7 million in August. The drop largely reflected lagging shipments in the automobile industry. New orders in durable goods industries were off $373.4 million (5.8%) to $6,095.7 million in September from $6,469.1 million in August; declines of $384.5 million in the transportation equipment industries and $96.7 million in primary metals industries far outweighed an increase of $30.5 million in electrical products. Among non-durable goods industries, where new orders declined 3.5% to $8,908.9 million from $9,232.6 million, decreases were evident in almost all industry groups.

- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufaçturières a été estimée à $15,004.6 millions, ce qui représente une baisse de 4.4% par rapport au mois précédent qui était de $15,701.7 millions. Cette baisse réflète encore le retard des livraisons dans l'industrie de l'automobile. Dans les industries des biens durables, la valeur estimative de $6,095.7 millions était inférieure de 5.8% ($373.4 millions) à la valeur d'août de $6,469.1 millions. Les baisses de $384.5 millions dans l'industrie d'équipement de transport et de $96.7 millions dans l'industrie de première transformation des métaux ont été compensées en partie par une augmentation de $30.5 millions dans l'industrie de fabrication de produits électriques. Les nouvelles commandes des biens non durables ont chuté de 3.5%, passant de $9,232.6 millions en août à $8,908.9 millions en septembre. Les diminutions sont évidentes dans tous les groupes d'industries.

- The seasonally adjusted preliminary estimate of the value of Canadian manufacturers' shipments in September was $15,376.9 million, down 5.3% from $16,235.9 million in August. While shipments were lower in 15 of the 20 major groups of industries, more that half the $859.0 million decline reflected a $449.5 million drop in transportation equipment industries. (In that group, shipments of automobile manufacturers failed for the second consecutive year to show a healthy increase from August to September although the unadjusted data for motor vehicle manufacturers' shipments over the month was slightly higher, the increase was much less than the historical pattern for the period, on which the adjustment for seasonal influences is based.) Durable goods industries shipments fell 8.0% to $6,426.1 million from $6,984.4 million and those of non-durable goods industries were down 3.2% to $8,950.8 million from $9,251.1 million.

- Après désaisonnalisation, la valeur estimative des livraisons des industries manufacturières canadiennes en septembre 1982, s'est établie à $15,376.9 millions, soit une baisse de 5.3% par rapport au chiffre révisé d'août de $16,235.9 millions. Des baisses ont été notées dans 15 des groupes majeurs. Plus que la moitié de la baisse de $859.0 millions dans la valeur désaisonnalisée, est attribuable à l'industrie de fabrication d'équipement de transport qui a chuté de $449.5 millions. Dans cette industrie les livraisons des produits automobiles n'ont pas démontré d'augmentation sensible d'août à septembre pour la deuxième année consécutive. Même si la valeur non désaisonnalisée des livraisons dans cette industrie était légèrement plus élevée, l'augmentation était beaucoup moindre que la tendance observée dans cette série pour cette période sur laquelle les ajustements saisonniers sont basés. Une diminution de 8.0% a été enrégistrée dans les biens durables qui sont passées de $6,984.4 millions à $6,426.1 millions, et une autre de 3.2% dans les biens non durables passant de $9,251.1 millions à $8,950.8 millions.

- The backlog of unfilled orders for all industries at the end of September 1982 was $17,216.4 million, seasonally adjusted, 2.1% below the August value of $17,588.7 million. Unfilled orders for durable goods industries dropped 2.1% to $15,064.6 million from $15,395.0 million, while those for non-durable goods industries declined 1.9% to $2,151.8 million from $2,193.7 million.

- Après désaisonnalisation, la valeur estimative des commandes en carnet s'est établie à $17,216.4 millions, soit une hausse aoe 2.1% par rapport à la valeur d'août de $17,588.7 millions. Les commandes en carnet des industries des biens durables ont diminué de 2.1%, passant de $15,395.0 millions à $15,064.6 millions. Une diminution de 1.9% a été enregistrée dans la valeur des commandes en carnet des biens non durables qui passe de $2,193.7 millions à $2,151.8 millions.

- The seasonally adjusted total value of inventory owned decreased 0.1% to an estimated $33,144.3 million in September from $33,178.6 million in August. Small declines in the value of inventory owned were reported in all of the 20 major industrial groups. Total inventory held, estimated at $34,647.8 million, was also off 0.1% from the August estimate of $34,665.6 million. The largest relative decline among inventory categories was in finshed products, down 0.4%; raw materials on hand were 0.2% lower, but goods in process increased 0.5%.

- Although inventories and shipments both declined, the relatively lower shipments in total increased the seasonally adjusted ratio of total inventory owned to shipments to 2.16:1 in September from 2,04:1 in August. The ratio of finished products inventory to shipments also increased to 0.75:1 from 0.71:1.

- Before adjustment for seasonal variation, total shipments in manufacturing industries in September were estimated at $16,075.7 million, up from $15,108.7 million in August. Shipments for the first nine months of 1982, in current dollar values, were estimated at $138,079.0 million, down 2.6% from $141,809.0 million in the January-September 1981 period.

- Le valeur désaisonnalisée des stocks possédés a passé de $33,178.6 millions en août à $33,144.3 millions en septembre, soit une baisse de 0.1%. De légères baisses furent notées dans 11 des 20 groupes majeurs. Le niveau des stocks détenus a lui aussi baissé de 0.1%, passant de $34,665.6 millions à $34,647.8 millions avec des baisses au chapitre des produits finis (-0.4%) et des matières premières (-0.2%). Par contre, les produits en cours de transformation ont augmenté de (0.5%).

- Puisque la baisse dans les livraisons fut plus prononcée que celle dans les inventaires possédés, le rapport désaisonnalisé du total des stocks possédés aux livraisons est passé de 2.04:1 en août à 2.16:1 en septembre. Le rapport des produits finis aux livraisons est passé de 0.71:1 en août à 0.75:1 en septembre.

- On a estimé à $16,075.7 millions les livraisons non désaisonnalisées en septembre alors qu'elles étaient de $15,108.7 millions en août. Pour les neuf premiers mois de 1982, les livraisons estimatives ont totalisé $138,079.0 millions contre $141,809.0 millions pour la période correspondante de 1981, soit une baisse de 2.6%.

CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the September 1982 publication are the first to be adjusted to the 1979 census. Values for prior years to 1979 have been previously benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. In addition, the calendar year totals of shipments values have been summarily adjusted to conform with the census of manufactures totals of shipments for 1980. Because the monthly estimates subsequent to 1980 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived. At the same time, by

CONCEPTS ET MÉTHODES

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de septembre 1982 sont les premières qui soient ajustées en fonction du recensement de 1979. Les chiffres pour les années jusqu'à 1979 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. L'échantillon demeure essentiellement constant d'une année à l'autre puisqu'il est tiré de la liste des établissements du recensement annuel des manufactures. On doit recourir à l'imputation pour les établissements ayant déclaré trop tard pour être pris en compte dans le calcul des estimations mensuelles. Comme les estimations mensuelles postérieures à 1980 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercice comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leur matières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bâteaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme

reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because the sample is drawn from the list of establishments included in the annual census of manufactures, it remains largely constant from one year to the next. Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

General Time Series Staff,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

investie dans les stocks par les fabricants. De même, en tenant compte des acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

De plus, les données sur les livraisons totales pour l'année civile ont été rectifiées sommairement en fonction des données préliminaires du recensement des manufactures sur les livraisons totales cette année-là. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repère du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Series chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

Service des séries chronologiques générales
Statistique Canada
Ottawa (Ontario) K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one, for the most erratic series it is six. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

Désaisonnalisation

On désaisonnalise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurance du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du *U.S. Bureau of the Census.*

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir renvois pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de six pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

FOOTNOTES

Table 1

(1) Separate series for the Yukon and the Northwest Territories are not published, but provision is made for them in the Canada total.

Table 3-4

(1) The series for raw materials in the petroleum industries; goods in process in the furniture and fixtures industries; and inventory held but not owned in the machinery and equipment, transportation equipment and electrical products industries contain no significant seasonality. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values when repeated may result from rounding techniques in data.

Note: Figures may not add due to rounding.

RENVOIS

Tableau 1

(1) Les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées; cependant elles sont inclues dans le total pour le Canada.

Tableau 3-4

(1) La série des matières brutes dans l'industrie pétrolière, des biens en cours de transformation dans l'industrie du meuble et des articles d'ameublement et des stocks détenus mais non possédés dans les industries des machines et du matériel, des transports et produits électriques ne présente aucune tendance saisonnière importante. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0V6 (Telephone: 996-7008) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(949-4020)
Halifax	(426-5331)	Regina	(359-5405)
Montréal	(283-5725)	Edmonton	(420-3027)
Ottawa	(992-4734)	Vancouver	(666-3691)

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7.

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0V6 (téléphone: 996-7008) ou au centre de consultation de Statistique Canada à:

19 — Industrie chimique 23
20 — Industries manufacturières diverses 24

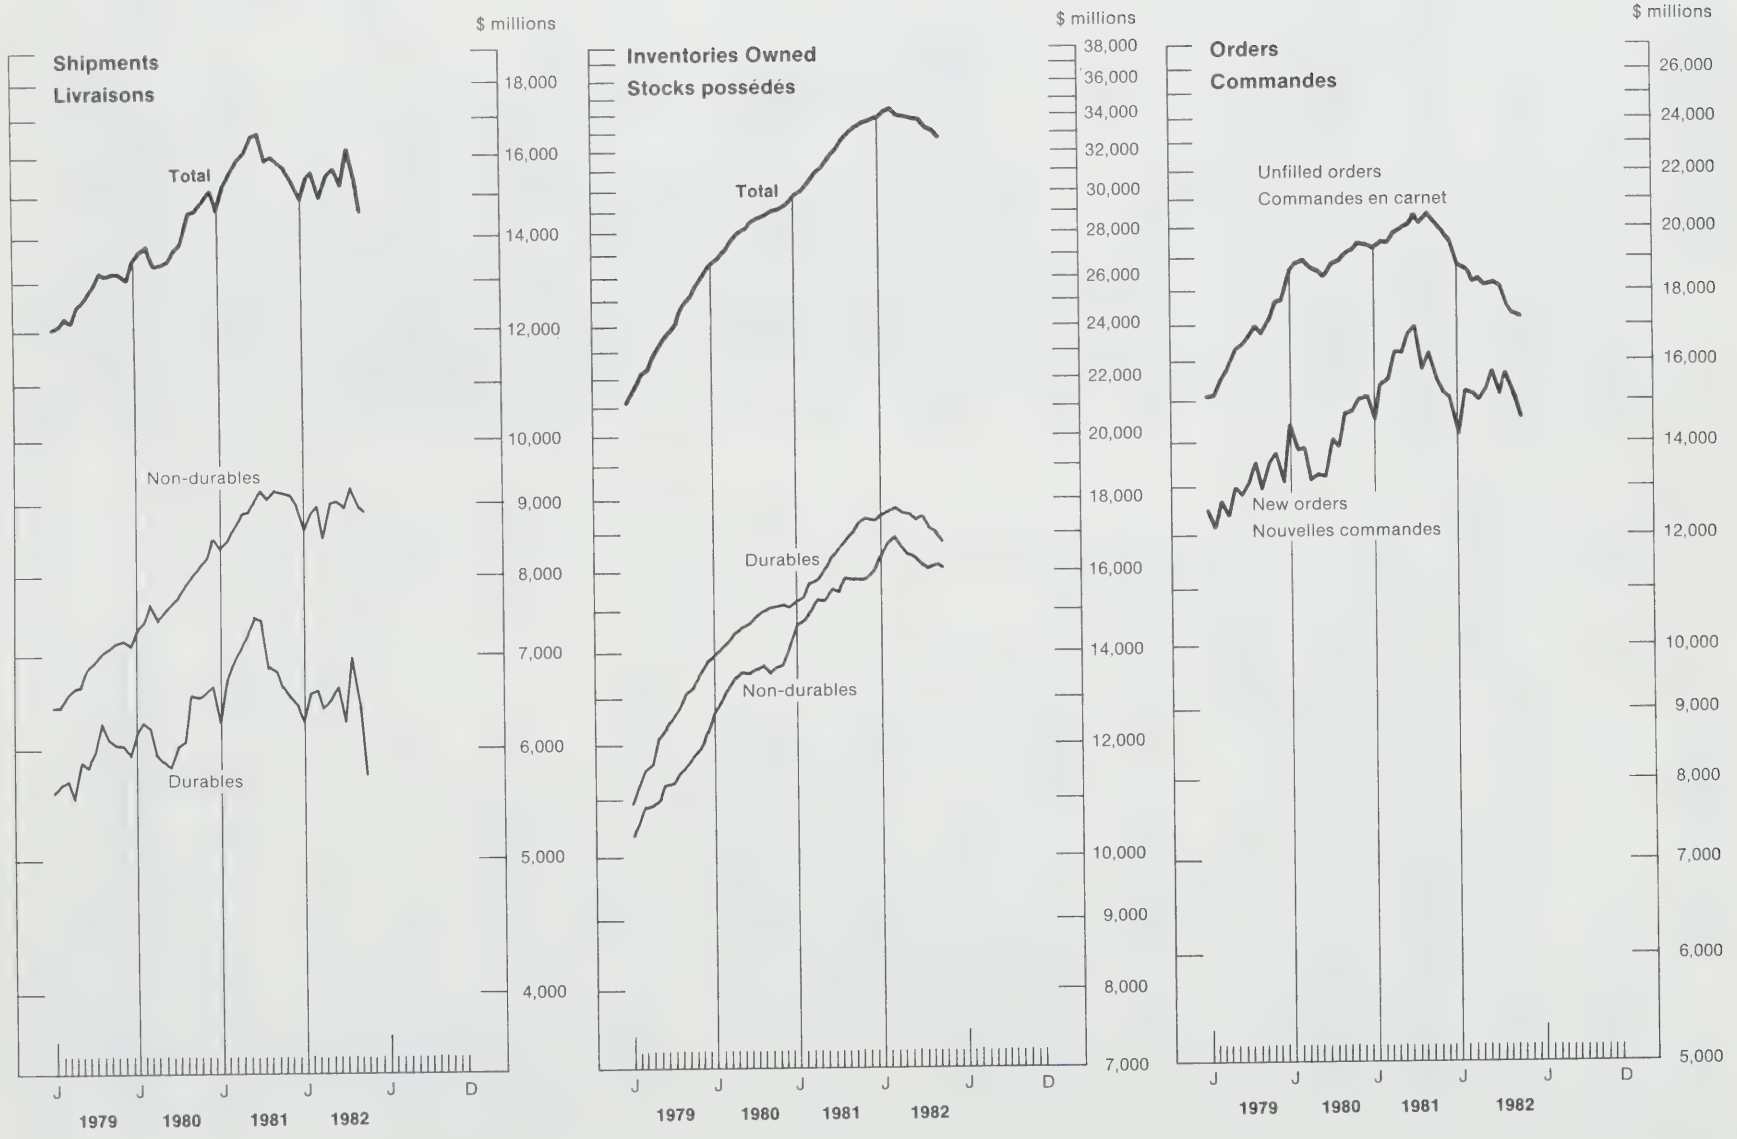
4. Valeur estimative des livraisons, commandes et stocks des industries manufacturières groupées d'après la classification économique en fonction de l'utilisation:

Industries des biens de consommation non durables 26
Industries des biens de consommation durables 27
Industries des machines et du matériel 28
Industries des matériaux et des éléments de construction 29
Industries des autres produits et fournitures intermédiaires 30
Industries orientées vers l'exportation 31
Classification complémentaire — industries connexes de l'automobile 32

5. Valeur estimative des livraisons, par groupe d'industries et province 34

6. Valeur estimative des livraisons, commandes et stocks de certaines industries particulières 46

7. Rapports du total des stocks possédés et des produits finis aux livraisons, par groupes d'industries (basées sur des chiffres désaisonnalisés) 69



Concepts et méthodes 70

Manufacturer's Shipments, Inventories and Orders, 1979-1982

Les livraisons, les stocks et les commandes des fabricants, 1979-1982

(Seasonally Adjusted — Chiffres désaisonnalisés)

(Ratio scale — Échelle semi-logarithmique)

HIGHLIGHTS

POINTS SAILLANTS

OCTOBER — 1982 — OCTOBRE

- Preliminary estimates show the value of seasonally adjusted new orders received in all Canadian manufacturing industries dropped 3.9% in October 1982 to $14,585.9 million from $15,173.4 million in September. In durable goods industries, new orders plunged 7.9% to $5,682.3 million from $6,172.8 million, reflecting large decreases in the machinery (-29.3%), transportation equipment (-15.4%) and primary metals industries (-9.5%); partly offsetting was an increase of 15.7% in the metal fabricating industries. New orders in non-durable goods industries were estimated at $8,903.6 million, 1.1% below the revised September value of $9,000.6 million.

- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à $14,585.9 millions en octobre 1982, soit une baisse de 3.9% par rapport au mois précédent ($15,173.4 millions). Dans les industries de biens durables, la valeur estimative ($5,682.3 millions) était inférieure de 7.9% à la valeur de septembre ($6,172.8 millions), reflétant ainsi des diminutions importantes dans les industries suivantes: machines (-29.3%), fabrication d'équipement de transport (-15.4%) et dans l'industrie de première transformation des métaux (-9.5%). Une augmentation de 15.7% a été cependant notée dans l'industrie de fabrication de produits en métal. Les nouvelles commandes des biens non durables ont baissé de 1.1%, passant de $9,000.6 millions en septembre à $8,903.6 millions en octobre.

- The seasonally adjusted preliminary estimate of the value of Canadian manufacturers' shipments in October was $14,683.2 million, down 4.7% from September's revised value of $15,414.6 million. Among the 20 major groups of industries, shipments were lower in 10 and higher in 10. Pulled down by a sharp decline in motor vehicle manufacturers' sales, shipments of durable goods industries dropped 10.5% to $5,782.0 million from $6,458.7 million. Shipments of non-durable goods industries were down 0.6% to $8,901.2 million from $8,955.9 million a month earlier.

- Après désaisonnalisation, la valeur estimative des livraisons des industries manufacturières canadiennes en octobre 1982 s'est établie à $14,683.2 millions, soit une baisse de 4.7% par rapport au chiffre révisé de septembre ($15,414.6 millions). Parmi les 20 groupes majeurs, des hausses furent notées dans 10 industries et des baisses dans les 10 autres. Une diminution de 10.5% a été enregistrée dans les biens durables qui sont passés de $6,458.7 millions à $5,782.0 millions. La baisse dans cette catégorie est attribuable à une grosse diminution des ventes des fabricants de véhicules automobiles. Les livraisons des biens non durables ont chuté de 0.6%, passant de $8,955.9 millions à $8,901.2 millions.

- The preliminary estimate of the backlog of unfilled orders in October was $17,250.2 million, seasonally adjusted, down 0.6% from the September revised value of $17,347.5 million. Unfilled orders in durable goods industries decreased 0.7% to $15,009.4 million from $15,109.1 million, while those in non-durable goods industries increased 0.1% to $2,240.8 million from $2,238.4 million a month earlier.

- La valeur estimative des commandes en carnet après désaisonnalisation s'est établie à $17,250.2 millions, ce qui représente une baisse de 0.6% par rapport au mois précédent ($17,347.5 millions). Les commandes en carnet de biens durables ont diminué de 0.7%, passant de $15,109.1 millions à $15,009.4 millions alors que celles des biens non durables ont augmenté de 0.1%, passant de $2,238.4 millions à $2,240.8 millions.

- The total seasonally adjusted value of inventory owned in October was $32,766.1 million, 0.8% lower than the $33,029.2 million revised September estimate. Total inventory held decreased 0.7% to $34,275.0 million from $34,528.3 million with decreases of 1.4% in the value of raw materials, 0.1% in goods in process and 0.4% in finished products.

- La valeur désaisonnalisée des stocks possédés a passé de $33,029.2 millions à $32,766.1 millions, soit une baisse de 0.8%. Les stocks détenus ont baissé de 0.7%, les portant ainsi à $34,275.0 millions par rapport aux $34,528.3 millions du mois précédent; on a enregistré des baisses au chapitre des matières premières (-1.4%), des produits en cours de transformation (-0.1%) et des produits finis (-0.4%).

- For the second consecutive month, there was a sharp rise in the seasonally adjusted ratio of inventory owned to shipments — to 2.23:1 in October from 2.14:1 in September. The increased ratio reflected both lower inventories and shipments, with the steeper decline in the latter; this ratio had stood at 2.04:1 in August after decreasing to that level from 2.28:1 in April 1982. The ratio of finished products inventory to shipments rose to 0.78:1 in October from 0.75:1 a month earlier.

- Pour le deuxième mois consécutif, le rapport désaisonnalisé du total des stocks possédés aux livraisons a augmenté et s'est établi à 2.23:1, soit une hausse par rapport à celui de septembre qui était de 2.14:1. Ce rapport est plus élevé en raison d'une baisse plus prononcée dans les livraisons que dans les inventaires. Il s'établissait à 2.04:1 en août, soit le plus bas niveau enregistré depuis avril 1982 alors qu'il était de 2.28:1. Le rapport des produits finis aux livraisons est passé de 0.75:1 à 0.78:1.

- Not adjusted for seasonal variation, manufacturers' shipments in October 1982 were estimated at $15,256.7 million, 5.3% lower than the revised September value of $16,113.6 million. Cumulative shipments for the first 10 months of 1982 at an estimated $153,373.6 million were down 3.3% from the $158,581.2 million estimated for the same period in 1981.

- On a estimé à $15,256.7 millions les livraisons non désaisonnalisées en octobre 1982, ce qui représente une baisse de 5.3% par rapport à la valeur révisée de septembre ($16,113.6 milllions). Pour les dix premiers mois de 1982, les livraisons estimatives ont totalisé $153,373.6 millions par rapport à $158,581.2 millions pour la période correspondante de 1981, soit une baisse de 3.3%.

CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the September 1982 publication are the first to be adjusted to the 1979 census. Values for prior years to 1979 have been previously benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. In addition, the calendar year totals of shipments values have been summarily adjusted to conform with the census of manufactures totals of shipments for 1980. Because the monthly estimates subsequent to 1980 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived. At the same time, by

CONCEPTS ET MÉTHODES

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de septembre 1982 sont les premières qui soient ajustées en fonction du recensement de 1979. Les chiffres pour les années jusqu'à 1979 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. L'échantillon demeure essentiellement constant d'une année à l'autre puisqu'il est tiré de la liste des établissements du recensement annuel des manufactures. On doit recourir à l'imputation pour les établissements ayant déclaré trop tard pour être pris en compte dans le calcul des estimations mensuelles. Comme les estimations mensuelles postérieures à 1980 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercice comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leur matières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bâteaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme

reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because the sample is drawn from the list of establishments included in the annual census of manufactures, it remains largely constant from one year to the next. Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

General Time Series Staff,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

investie dans les stocks par les fabricants. De même, en tenant compte des acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

De plus, les données sur les livraisons totales pour l'année civile ont été rectifiées sommairement en fonction des données préliminaires du recensement des manufactures sur les livraisons totales cette année-là. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repère du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Series chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

Service des séries chronologiques générales
Statistique Canada
Ottawa (Ontario) K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one, for the most erratic series it is six. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

Désaisonnalisation

On désaisonnalise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurance du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du *U.S. Bureau of the Census*.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir renvois pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de six pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

FOOTNOTES

Table 1

(1) Separate series for the Yukon and the Northwest Territories are not published, but provision is made for them in the Canada total.

Table 3-4

(1) The series for raw materials in the petroleum industries; goods in process in the furniture and fixtures industries; and inventory held but not owned in the machinery and equipment, transportation equipment and electrical products industries contain no significant seasonality. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values when repeated may result from rounding techniques in data.

Note: Figures may not add due to rounding.

RENVOIS

Tableau 1

(1) Les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées; cependant elles sont inclues dans le total pour le Canada.

Tableau 3-4

(1) La série des matières brutes dans l'industrie pétrolière, des biens en cours de transformation dans l'industrie du meuble et des articles d'ameublement et des stocks détenus mais non possédés dans les industries des machines et du matériel, des transports et produits électriques ne présente aucune tendance saisonnière importante. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

Statistics Canada Statistique Canada

Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0V6 (Telephone: 996-7008) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(949-4020)
Halifax	(426-5331)	Regina	(359-5405)
Montréal	(283-5725)	Edmonton	(420-3027)
Ottawa	(992-4734)	Vancouver	(666-3691)
Toronto	(966-6586)		

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7.

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0V6 (téléphone: 996-7008) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Winnipeg	(949-4020)

(Ratio scale — Échelle semi-logarithmique)

HIGHLIGHTS

POINTS SAILLANTS

NOVEMBER — 1982 — NOVEMBRE

- Preliminary estimates show the value of new orders received in all Canadian manufacturing industries in November 1982, seasonally adjusted, increased 7.4% to $15,488.4 million from the revised level of $14,427.5 million in October. In durable goods industries, new orders with an estimated value of $6,574.1 million were up sharply, showing an 18.2% advance over the revised October value of $5,561.8 million. Most of the increase was the result of an order for mass transit equipment; this, in combination with lesser increases in other industries that manufacture transportation equipment boosted the value of orders received by establishments classified to that group by $917.9 million or 58.5%. There were increases in other durable goods groups as well: new orders for electrical products rose 7.6% and those for primary metals were up 6.8%. In non-durable goods industries, new orders rose 0.5% to $8,914.3 million from $8,865.7 million.

- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à $15,488.4 millions en novembre 1982, soit une hausse de 7.4% par rapport à la valeur révisée du mois précédent qui était de $14,427.5 millions. Dans les industries des biens durables, la valeur estimative de $6,574.1 millions était supérieure de 18.2% à la valeur révisée du mois d'octobre ($5,561.8 millions). Cette augmentation est due en grande partie à une commande pour de l'équipement de transport en commun. Cette augmentation, de même que d'autres augmentations moins importantes dans les industries qui manufacturent de l'équipement de transport,ont haussé la valeur des commandes reçues par les établissements classifiés dans ce groupe de $917.9 millions ou 58.5%. D'autres augmentations ont aussi été observées dans le groupe des industries des biens durables, soit celui de la fabrication de produits électriques (7.6%) et celui de la première transformation des métaux (6.8%). Les nouvelles commandes des biens non durables ont augmenté de 0.5%, passant de $8,865.7 millions à $8,914.3 millions.

- The seasonally adjusted preliminary estimate of the value of Canadian manufacturers' shipments in November was $14,783.3 million, up 1.1% from October's revised $14,620.3 million. While no major change was noted in any of the 20 major groups, shipments were higher in 14 and lower in six. Shipments of durable goods industries increased 1.2% to $5,822.6 million from $5,751.1 million in October, while those in non-durable goods industries were up 1.0% to $8,960.7 million from $8,869.2 million.

- Après désaisonnalisation, la valeur estimative des livraisons des industries manufacturières canadiennes s'est établie à $14,783.3 millions, soit une hausse de 1.1% par rapport à la valeur révisée d'octobre qui était de $14,620.3 millions. Des hausses furent notées dans 14 des 20 groupes majeurs et des baisses dans six. Une augmentation de 1.2% a été enregistrée pour les biens durables, qui sont passés de $5,751.1 millions à $5,822.6 millions. Les livraisons des biens non durables ont atteint $8,960.7 millions, ce qui représente une hausse de 1.0% par rapport aux $8,869.2 millions enregistrés au mois d'octobre.

- The seasonally adjusted preliminary estimate of the value of the unfilled orders backlog at the end of November was $17,859.8 million, an increase of 4.1% from the revised October estimate of $17,154.7 million. Unfilled orders in durable goods industries were up 5.0% to $15,671.3 million from $14,919.8 million at the end of October, but those in non-durable goods industries declined 2.1% to $2,188.5 million from $2,234.9 million a month earlier.

- À la fin du mois de novembre 1982, la valeur estimative des commandes en carnet, après désaisonnalisation, s'est établie à $17,859.8 millions, soit une hausse de 4.1% par rapport au mois précédent ($17,154.7 millions). Les commandes en carnet des biens durables ont augmenté de 5.0%, passant de $14,919.8 millions à $15,671.3 millions, alors que celles des biens non durables ont diminué de 2.1%, passant de $2,234.9 millions à $2,188.5 millions.

- Inventory owned by manufacturers at the end of November was a seasonally adjusted $32,450.3 million, down 1.0% from the preceding month's revised value of $32,791.7 million. Total inventory held decreased 1.1% to $33,910.9 million from $34,303.3 million with decreases of 2.6% in goods in process and 1.4% in finished products and a slight increase of 0.1% in the value of raw materials.

- La valeur désaisonnalisée des stocks possédés est passée de $32,791.7 millions à $32,450.3 millions, soit une baisse de 1.0%. Les stocks détenus ont baissé de 1.1%, les portant ainsi à $33,910.9 millions comparativement à $34,303.3 millions, avec des baisses au chapitre des produits en cours de transformation (-2.6%), des produits finis (-1.4%) et une légère augmentation de 0.1% pour les matières premières.

- The seasonally adjusted ratio of total inventory owned to shipments at the end of November was 2.20:1, down from 2.24:1 in October. The ratio of finished products to shipments declined to 0.77:1 from 0.79:1.

- Le rapport désaisonnalisé du total des stocks possédés aux livraisons en novembre 1982 s'est établi à 2.20:1, soit une baisse par rapport à celui d'octobre qui était de 2.24:1. Le rapport des produits finis aux livraisons est passé de 0.79:1 à 0.77:1.

- Not adjusted for seasonal variation, manufacturers' shipments in November 1982 were estimated at $15,232.6 million, 0.3% higher than the revised October 1982 value of $15,192.7 million. Cumulative shipments

- On a estimé à $15,232.6 millions les livraisons non désaisonnalisées en novembre 1982, ce qui représente une hausse de 0.3% par rapport à la valeur révisée d'octobre ($15,192.7 millions). Pour les 11 premiers mois de 1982, les livraisons

for the first 11 months of 1982 at an estimated $168,-542.3 million were down 3.4% from the January-November 1981 total of $174,389.7 million.

estimatives ont totalisé $168,542.3 millions contre $174,389.7 millions pour la période correspondante de 1981, soit une baisse de 3.4%.

CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the September 1982 publication are the first to be adjusted to the 1979 census. Values for prior years to 1979 have been previously benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. In addition, the calendar year totals of shipments values have been summarily adjusted to conform with the census of manufactures totals of shipments for 1980. Because the monthly estimates subsequent to 1980 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived. At the same time, by

CONCEPTS ET MÉTHODES

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de septembre 1982 sont les premières qui soient ajustées en fonction du recensement de 1979. Les chiffres pour les années jusqu'à 1979 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. L'échantillon demeure essentiellement constant d'une année à l'autre puisqu'il est tiré de la liste des établissements du recensement annuel des manufactures. On doit recourir à l'imputation pour les établissements ayant déclaré trop tard pour être pris en compte dans le calcul des estimations mensuelles. Comme les estimations mensuelles postérieures à 1980 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercice comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leur matières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bâteaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme

reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because the sample is drawn from the list of establishments included in the annual census of manufactures, it remains largely constant from one year to the next. Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

General Time Series Staff,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

investie dans les stocks par les fabricants. De même, en tenant compte des acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

De plus, les données sur les livraisons totales pour l'année civile ont été rectifiées sommairement en fonction des données préliminaires du recensement des manufactures sur les livraisons totales cette année-là. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repère du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Series chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

Service des séries chronologiques générales
Statistique Canada
Ottawa (Ontario) K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one, for the most erratic series it is six. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

Désaisonnalisation

On désaisonnalise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurance du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du *U.S. Bureau of the Census*.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir renvois pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de six pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

FOOTNOTES

Table 1

(1) Separate series for the Yukon and the Northwest Territories are not published, but provision is made for them in the Canada total.

Table 3-4

(1) The series for raw materials in the petroleum industries; goods in process in the furniture and fixtures industries; and inventory held but not owned in the machinery and equipment, transportation equipment and electrical products industries contain no significant seasonality. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values when repeated may result from rounding techniques in data.

Note: Figures may not add due to rounding.

RENVOIS

Tableau 1

(1) Les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées; cependant elles sont inclues dans le total pour le Canada.

Tableau 3-4

(1) La série des matières brutes dans l'industrie pétrolière, des biens en cours de transformation dans l'industrie du meuble et des articles d'ameublement et des stocks détenus mais non possédés dans les industries des machines et du matériel, des transports et produits électriques ne présente aucune tendance saisonnière importante. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0V6 (Telephone: 996-7008) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(949-4020)
Halifax	(426-5331)	Regina	(359-5405)
Montréal	(283-5725)	Edmonton	(420-3027)
Ottawa	(992-4734)	Vancouver	(666-3691)
Toronto	(966-6586)		

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7.

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0V6 (téléphone: 996-7008) ou au centre de consultation de Statistique Canada à:

Manufacturer's Shipments, Inventories and Orders, 1979-1982

Les livraisons, les stocks et les commandes des fabricants, 1979-1982

(Seasonally Adjusted — Chiffres désaisonnalisés)

(Ratio scale — Échelle semi-logarithmique)

HIGHLIGHTS

POINTS SAILLANTS

DECEMBER — 1982 — DECEMBRE

- Preliminary estimates show the seasonally adjusted value of new orders received in all Canadian manufacturing industries in December 1982 dropped 4.3% to $14,394.6 million from the revised estimate of $15,048.4 million in November. In durable goods industries, new orders with an estimated value of $5,568.8 million were down steeply, showing a 9.0% fall from $6,121.0 million in November. Most of the decrease was attributable to a drop of $848.9 million (-37.3%) in the transportation equipment group of industries which followed an unusually large advance in November. When the transportation equipment group of industries is excluded from the total, new orders received in the remaining 19 major groups showed a decrease in November but an increase in December; new orders were 23.8% higher in the primary metals groups and up 7.4% in metal fabricating. In non-durable goods industries, new orders had an estimated value of $8,825.8 million, down 1.1% from $8.927.4 million in November.

- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à $14,394.6 millions en décembre 1982, soit une baisse de 4.3% par rapport à la valeur du mois précédent qui était de $15,048.4 millions. Dans les industries de biens durables, la valeur estimative de $5,568.8 millions était inférieure de 9.0% à la valeur de novembre ($6,121.0 millions). Cette diminution est principalement attribuable à une baisse de $848.9 millions (-37.3%) dans le groupe des industries de fabrication d'équipement de transport. En novembre, les nouvelles commandes de cette industrie étaient à la hausse à cause d'un volume de commandes inhabituel. Cependant, si nous enlevons le total de ce groupe d'industries du total de l'ensemble des nouvelles commandes, ces dernières ont baissé dans les 19 autres groupes en novembre mais ont augmenté en décembre. Des augmentations ont été notées dans les groupes des industries de biens durables, soit dans la fabrication de produits en métal (+ 23.8%) et dans la première transformation des métaux (+ 7.4%). Les nouvelles commandes de biens non durables ont baissé de 1.1%, passant de $8,927.4 millions en novembre à $8,825.8 millions en décembre.

- The seasonally adjusted preliminary estimate of the value of the unfilled orders backlog at the end of December was $16,921.9 million, down 2.8% from the revised November estimated of $17,412.4 million. Unfilled orders in durable goods industries were down 2.9% to $14,792.5 million from $15,234.1 million, and those in non-durable goods industries decreased 2.2% to $2,-129.4 million from $2,178.3 million a month earlier.

- La valeur estimative des commandes en carnet, après désaisonnalisation, s'est établie à $16,921.9 millions, ce qui représente une baisse de 2.8% par rapport au mois précédent ($17,412.4 millions). Les commandes en carnet de biens durables ont diminué de 2.9%, passant de $15,234.1 millions à $14,792.5 millions et celles de biens non durables ont diminué de 2.2%, passant à $2,129.4 millions de $2,178.3 millions.

- The seasonally adjusted preliminary estimate of the value of Canadian manufacturers' shipments in December was $14,885.1 million, up 0.6% from November's revised value of $14,790.7 million. Among the 20 major groups of industries, shipments were higher in 10 and lower in 10. Shipments of durable goods industries were up 3.5% to $6,010.4 million from $5,806.7 million; a $140.5 million increase in the metal fabricating group of industries accounted for almost 70% of this gain. A $78.5 million decrease in the petroleum and coal products group of industries was the major contributor to a 1.2% drop in shipments in the non-durable goods industries which declined to $8,874.7 in December from $8,984.0 million in November.

- Après désaisonnalisation, la valeur estimative des livraisons des industries manufacturières canadiennes en décembre 1982 s'est établie à $14,885.1 millions, soit une hausse de 0.6% par rapport au chiffre révisé de novembre qui était de $14,790.7 millions. Parmi les 20 groupes majeurs, des hausses ont été notées dans 10 de ces groupes et des baisses dans les 10 autres. Les livraisons de biens durables sont passées de $5,806.7 millions à $6,010.4 millions, soit une hausse de 3.5% dont 70% de cette dernière a été causé par l'augmentation de $140.5 millions dans l'industrie de fabrication de produits en métal. Les livraisons de biens non durables ont chuté de 1.2%, passant de $8,984.0 millions à $8,874.7 millions. Cette diminution est due en partie à une baisse de $78.5 millions dans l'industrie de fabrication de produits du pétrole et du charbon.

- Seasonally adjusted inventory owned by manufacturers at the end of December was $31,551.2 million, down 2.6% from the preceding month's revised value of $32,378.3 million. Total inventory held decreased 2.4% to $33,012.4 million from $33,837.6 million with decreases of 3.2% in finished products, 2.5% in raw materials and 1.4% in goods in process.

- La valeur désaisonnalisée de stocks possédés est passée de $32,378.3 millions à $31,551.2 millions, soit une baisse de 2.6%. Pour leur part, les stocks détenus ont atteint $33,012.4 millions par rapport à $33,837.6 millions le mois précédent, soit une baisse de 2.4%. Les stocks détenus ont connu des baisses au chapitre des produits finis (-3.2%), des matières premières (-2.5%) et des produits en cours de transformation (-1.4%).

- The seasonally adjusted ratio of total inventory owned to shipments at the end of December was 2.12:1, down from 2.19:1 in November. The ratio of finished products to shipments declined to 0.74:1 from 0.77:1.

- Le rapport désaisonnalisé du total des stocks possédés aux livraisons s'est établi à 2.12:1, soit une baisse par rapport à celui de novembre qui était de 2.19:1. Le rapport des produits finis aux livraisons est passé de 0.77:1 à 0.74:1.

- Not adjusted for seasonal variation, manufacturers' shipments in December 1982 were estimated at $14,-447.1 million, down 5.2% from the revised November 1982 value of $15,239.8 million. Cumulative shipments for the year 1982 at an estimated $182,996.6 million were 3.3% below the 1981 total of $189,312.7 million.

- On a estimé à $14,447.1 millions les livraisons non désaisonnalisées en décembre 1982, ce qui représente une baisse de 5.2% par rapport à la valeur révisée de novembre qui était de $15,239.8 millions. En 1982, les livraisons estimatives ont totalisé $182,996.6 millions contre $189,312.7 millions l'année précédente, soit une baisse de 3.3%.

CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the September 1982 publication are the first to be adjusted to the 1979 census. Values for prior years to 1979 have been previously benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. In addition, the calendar year totals of shipments values have been summarily adjusted to conform with the census of manufactures totals of shipments for 1980. Because the monthly estimates subsequent to 1980 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived. At the same time, by

CONCEPTS ET MÉTHODES

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de septembre 1982 sont les premières qui soient ajustées en fonction du recensement de 1979. Les chiffres pour les années jusqu'à 1979 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. L'échantillon demeure essentiellement constant d'une année à l'autre puisqu'il est tiré de la liste des établissements du recensement annuel des manufactures. On doit recourir à l'imputation pour les établissements ayant déclaré trop tard pour être pris en compte dans le calcul des estimations mensuelles. Comme les estimations mensuelles postérieures à 1980 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leur matières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés: La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bâteaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme

reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because the sample is drawn from the list of establishments included in the annual census of manufactures, it remains largely constant from one year to the next. Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

General Time Series Staff,
Statistics Canada,

investie dans les stocks par les fabricants. De même, en tenant compte des acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

De plus, les données sur les livraisons totales pour l'année civile ont été rectifiées sommairement en fonction des données préliminaires du recensement des manufactures sur les livraisons totales cette année-là. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repère du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Series chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

Service des séries chronologiques générales

Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one, for the most erratic series it is six. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

Désaisonnalisation

On désaisonnalise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurance du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du *U.S. Bureau of the Census*.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir renvois pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de six pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

FOOTNOTES

Table 1

(1) Separate series for the Yukon and the Northwest Territories are not published, but provision is made for them in the Canada total.

Table 3-4

(1) The series for raw materials in the petroleum industries; goods in process in the furniture and fixtures industries; and inventory held but not owned in the machinery and equipment, transportation equipment and electrical products industries contain no significant seasonality. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values when repeated may result from rounding techniques in data.

Note: Figures may not add due to rounding.

RENVOIS

Tableau 1

(1) Les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées; cependant elles sont inclues dans le total pour le Canada.

Tableau 3-4

(1) La série des matières brutes dans l'industrie pétrolière, des biens en cours de transformation dans l'industrie du meuble et des articles d'ameublement et des stocks détenus mais non possédés dans les industries des machines et du matériel, des transports et produits électriques ne présente aucune tendance saisonnière importante. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.
